

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

HAYSTACK OBSERVATORY

WESTFORD, MASSACHUSETTS 01886

Telephone: 978-692-4764

Fax: 781-981-0590

12 July 2002

TO: Distribution
FROM: Alan R. Whitney
SUBJECT: 11 July 2002 e-VLBI telecon summary

Attendees:

Lee Foster, Bill Fink, Pat Gary, Kevin Kranacs, Paul Lang – GSFC

Steve Bernstein, Lorraine Prior, Peter Schultz – Lincoln Laboratory

Tom Lehman – ISI-E

Richard Crowley, Hans Hinteregger, Arthur Niell, Mike Titus, Alan Whitney – Haystack Observatory

This telecon is one of an ongoing series of telecons to prepare for gigabit/sec e-VLBI demonstrations between NASA GSFC and MIT Haystack Observatory using a combination of network facilities including all or part of Glownet, Bossnet, ISI-E, SuperNet, Max and GSFC/HECN.

Status Reports

The attached figures of the e-VLBI path have been updated to reflect current status and are pretty much self-explanatory; critical status items are indicated in red. In addition, the following comments are relevant:

- Peter reported that there is still a problem with the OC-48 Bossnet service and LL is short of personnel to address the problem immediate. As a result, Bossnet will be maintained as a GigE link until at least August. The GigE link seems to be working properly and is suitable for the e-VLBI demonstration; however, the Bossnet GigE link is shared with MIT campus, so Bossnet use for e-VLBI needs to be scheduled (via Bossnet scheduling calendar) so that campus activity can be suspended while e-VLBI testing takes place. The Bossnet problem appears to be somewhere in the path between New York and Newark, but is not yet isolated.
- Router configurations at G10, H3 and H7 have been updated, as promised at the last meeting, for e-VLBI use.
- Test workstation at K6 is now named ‘clifford’ (not ‘dawg’). Alan will update on workstation specification list.
- Lorraine reported that another LL demonstration using Glownet is scheduled for 22 July, during which time Glownet will be unavailable for e-VLBI.
- Haystack target date is tentatively August for full demonstration.

Performance Testing

Bill F. requested that all test workstations install a nuttcp server to facilitate ease of testing. He will distribute a note to everyone with details of the installation procedure (has been done).

Kevin D. conducted several short tests from Haystack ('evlibhay') to GSFC/GGAO ('pluto'), achieving ~350 Mbps throughput. Below is a summary of his results:

Configuration MIT(evlibhay):

```
ip          140.173.174.4
mtu         4470 (9000 max)
mss         4418
/proc/sys/net/core/wmem_max      8388608
/proc/sys/net/core/rmem_max      8388608
/proc/sys/net/ipv4/tcp_timestamps 1
/proc/sys/net/ipv4/tcp_sack      1
/proc/sys/net/ipv4/tcp_wmem      "4096 1048576 8388608"
/proc/sys/net/ipv4/tcp_rmem      "4096 1048576 8388608"
nuttcp      v3.1.9
```

Configuration GGAO(pluto):

```
ip          206.196.178.53
nuttcp      v3.2.1
```

Rtt: ~ 15 msec

Throughput: ~ 350 Mb/s (Haystack to GGAO)

Note: Only very short duration (1-15 secs) tests were done.

The following was typical output:

```
[kad@evlibhay bin]$ ./nuttcp -t -l4418 -n16384 -w2048 -ws2048 206.196.178.53
nuttcp-t: v3.1.9: socket
nuttcp-t: buflen=4418, nbuf=16384, nstream=1, port=5001 tcp -> 206.196.178.53
nuttcp-t: connect to 206.196.178.53
nuttcp-t: send window size = 4194304, receive window size = 1048576
nuttcp-t: 69.031 MB in 1.64 real seconds = 43007.87 KB/sec = 352.3205 Mb/s
nuttcp-t: 16384 I/O calls, msec/call = 0.10, calls/sec = 9968.33
nuttcp-t: 0.0user 0.3sys 0.01real 21% 0i+0d 0maxrss 0+0pf 0+0csw
```

```
nuttcp-r: v3.2.1: socket
nuttcp-r: buflen=4418, nbuf=16384, nstream=1, port=5001 tcp
nuttcp-r: accept from 140.173.174.4
nuttcp-r: send window size = 16384, receive window size = 2097152
nuttcp-r: 69.031 MB in 1.68 real seconds = 41996.25 KB/sec = 344.0333 Mb/s
nuttcp-r: 69.031 MB in 0.22 CPU seconds = 321309.09 KB/cpu sec
nuttcp-r: 16467 I/O calls, msec/call = 0.10, calls/sec = 9783.16
nuttcp-r: 0.0user 0.2sys 0.01real 13% 0i+0d 0maxrss 1+1pf 0+0csw
```

Kevin D. feels that there may some tuning issues on 'pluto', but he was unable to get a password to make tuning changes. Bill F. will work with Kevin on 'pluto' tuning issues. Tom also suggested trying a multi-stream TCP process to improve aggregate throughput rate (easily done with nuttcp).

nuttcp is not yet ported to Windows. Lee reports that a summer student is currently working on this project.

Tom will investigate possibility of putting nuttcp on MAX test workstations, but warned that these machines are not particularly high-performance machines so probably may not be able to draw useful performance conclusions.

Tom and Bill will coordinate increasing mtu size on paths between ISI-E and MAX. The issue is complicated by the use of 'frame relay encapsulation' on some of these links and links to Abilene.

Action Items

Bill F.: Distribute information on nuttcp routine (has been done).

Tom/Bill F.: Will coordinate installation of nuttcp on ISI-E test machines (Tom will be on vacation for next two weeks, but will be available via e-mail occasionally during this time). Bill will then do testing on ISI-E/GSFC link and report to group.

Tom/Bill F.: Will coordinate mtu change on ISI-E/MAX links.

Tom: Will investigate possibility of putting nuttcp on MAX test workstations.

Kevin D./Bill F.: Will coordinate to allow Kevin access to 'pluto' (requires Kerberos account).

Next telecon

Next telecon will be **Wed, 7 Aug 2002** at 2 pm.
